beautiful teeth and

teeth that work beautifully

Nobel Biocare can help

Nobel Biocare has been dedicated to solving tooth problems for over 40 years. We've become world leaders in esthetic dentistry by developing optimized solutions to any problem you might face.

Now there's no need to worry if you're missing a tooth, or even several teeth. With Nobel Biocare implants, missing teeth can now be easily, comfortably and permanently replaced.

dental implants – the modern solution

Dental implants caused a revolutionary change in dentistry. Implants are man-made replacements for the tooth roots that have been lost. They behave exactly like real roots – even bonding naturally with the jawbone. We call this 'osseointegration'. The new ceramic tooth is anchored permanently on top of the implant.

Millions of people all over the world now enjoy Nobel Biocare implants. This simple surgery can transform your confidence and improve your looks.

Everyone deserves a beautiful smile. With these tremendous advances in esthetic dentistry, there's no need to put up with anything less. Nobel Biocare Crowns and Bridges and Implants will look and work like your original teeth.

short surgery

Inserting Nobel Biocare implants is typically quick and easy. It is virtually pain-free.

eat straightaway

Your dentist makes it possible to have new, fully working teeth, sometimes in as little as one hour.

perfect fit. perfect match

When coupled with Procera® crowns or bridges, your new teeth are indistinguishable from your real teeth.

eat whatever you like

Implants are stable and secure, so you can comfortably eat all your favorite foods.

metal-free – for a beautiful smile

Nobel Biocare Procera® ceramic teeth are completely metal-free and will leave no ugly black lines.

keep looking younger

When you lose a tooth, your jawbone can shrink – making you look older. Implants help prevent this process.

save healthy teeth

With traditional methods, the teeth beside a gap have to be ground down to fix a bridge. Implants often make this unnecessary.

an answer for life

Nobel Biocare dental implants are the long-lasting solution – often for life.

one tooth missing

Here's an example of how a dentist replaces a missing tooth; in this case with a 'one-piece' ceramic crown and implant. It's just one of several options, so consult your dentist to find the best solution for your individual condition.

installing a new tooth, step by step.

- 1. beforehand** – The dentist makes a first examination and takes x-rays.
- 2. installing the implant** – Once the short surgery is completed, a temporary tooth lets you eat and behave as normal. The implant needs a few months to integrate with the jaw.
- 3. fitting the new crown** – The final step is placing the permanent Procera® Ceramic Crown. Now the new tooth is installed for life.
- 4. the beautiful result** – The new tooth should fit and function just like a natural tooth. Continue your usual dental hygiene to keep both tooth and gum healthy.

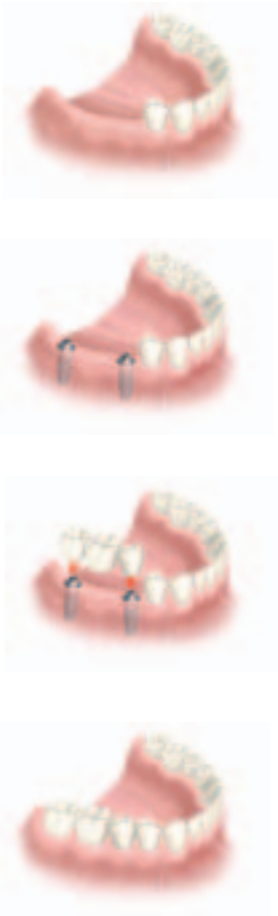

several teeth missing

Here's an example of how a dentist replaces 3 missing teeth. In this case, a fixed bridge – with all the teeth contained in one unit – is anchored to dental implants.

This treatment is just one of several options, so consult your dentist to find the best solution for your individual condition.

installing a fixed bridge on implants.

- 1. beforehand** – The dentist makes a first examination and takes x-rays.
- 2. installing the implants** – This is normally done in a single session. A temporary bridge may be placed at the same time, so you can function normally almost immediately after leaving the dentist's office.
- 3. attaching the bridge** – Implants usually need a month or two to integrate with the jaw. Once they've 'taken', the permanent bridge can be fixed to the implants.
- 4. the beautiful result** – The new Procera® Bridge will handle all the pressure that your strong, natural back teeth did. You can now eat whatever you like.

“There was no discomfort at all”

“The procedure was pain-free and fast. There was no discomfort afterwards, whatsoever. My new teeth feel like a natural part of me. They also make me feel and act more naturally again – smiling with confidence, chewing on both sides like normal. I can definitely recommend this to others.” says Gun-Britt.

“Dental implants made me smile again”

“In an accident I lost three teeth. An implant-retained fixed bridge has enabled me to once again enjoy every day life. The impact is double to triple what I expected.” says Alice.

ask your dentist for

beautiful teeth now™

With Nobel Biocare dental implants, you no longer have to be embarrassed or worried about your teeth. In fact, new teeth can transform your self-esteem. Again and again, we find that a beautiful smile makes a real difference to people's lives.

Ask your dentist about the ways in which Nobel Biocare can help you. Why wait to start smiling?
